SAFE TAG

SAFE TAG

How to:

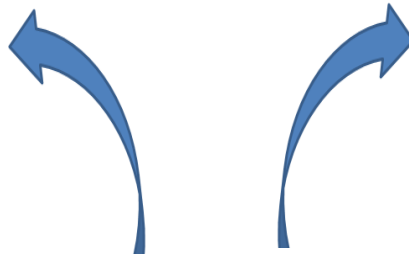

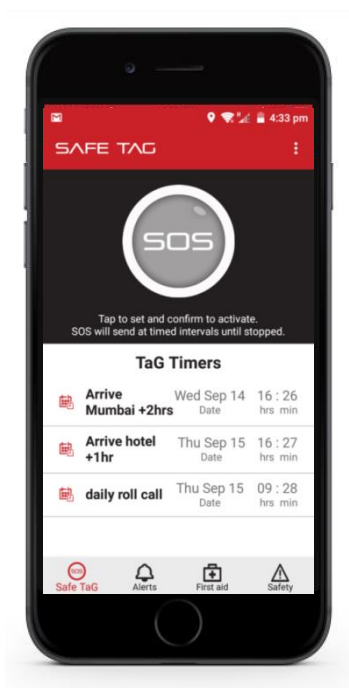

Set up your Contacts for your

- Failure to 'TaG-in' warning system
- Instant emergency SOS

'You need a primary contact called an Administrator - you can add other contacts later as you get to know the app.'

SAFE TAG

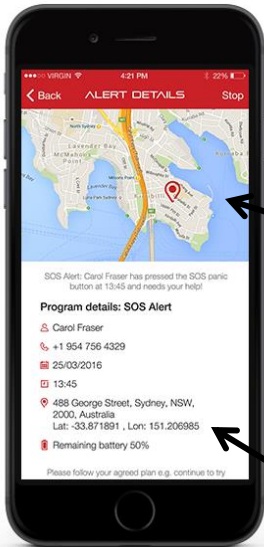

Set Up

Tap Menu +
Contacts
to begin

Contacts receive Alerts

Administrators can stop a User's program if you can't get to your App

Interactive Map shows GPS address using GPS co-ordinates

GPS co-ordinates and closest address, and User's Remaining battery

'Alerts are sent when you activate a TaG program or press SOS'

Set Administrator

First name

Last name

Email

Phone

Private contact Off

Work contact off

Preset TaG contact **i** Off

Administrator contact **i** Off

Notifications levels

Insert name and contact details

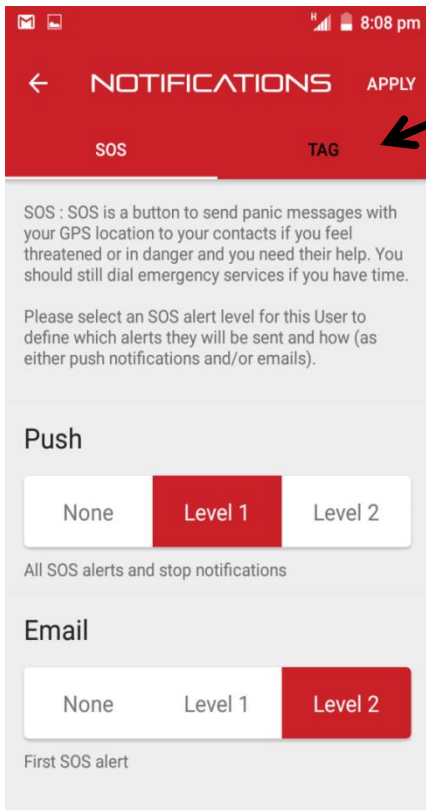

Turn on Administrator control

Set notification levels

Then tap SAVE

‘Administrator will be automatically allocated to all groups - Work, Private and your Preset Tap and Go (TaG) Timer’

Set Notification Levels

Allocate Contacts to levels of notifications in both SOS and TAG

The default is level 1

Level 1 receive all notifications.

Level 2 receive only selected notifications

Remember –

- If your phone is flat your GPS location cannot be updated but messages are sent from the ‘Cloud’.
- The Contact knows how old your GPS data is and can adjust their investigations taking that into account.
- Use multiple settings carefully, make sure you have your phone.
- GPS detail is presented in Google maps and contacts can select directions and navigate to the User’s last known location.
